

Architecture of above parts of underground structures are of course of great interest. recently, architects also paid attention to the architecture of the underground structures by itself.

Of course metro and railway stations are the main and best examples of such architectural efforts.

The impact of natural lighting is one of the most importance in the underground structure as it plays a main role in acceptability in the use of those structures.

ITA Recommended Papers

This presentation has been made by Ms. Sushma Goh, Singapore, during the ITA Open session In Singapore 2004. This presentation is fully illustrated by diagrams and photographs of good examples of underground space architecture. She challenged our industry to always consider the human aspects of our industry.
